

WEEKS 13-24 · COHORT 2 · 12-WEEK AGENDA

The AI Operator Agenda

12 weeks. One field-ready operating system.

A full-color learning map for leaders who want to turn AI tools into practical B2B momentum.

7 PROGRAM BLOCKS

A clear sequence from conversational AI to capstone operating leadership.

FIELD FIRST

Every week ends with a specific workflow to practice in the real world.

HUMAN LED

Better context, stronger judgment, and accountable action at every stage.

From AI conversation to field operating system.

Each block adds a new capability while preserving the same foundation: clear outcome, relevant context, explicit guardrails, and human accountability.

WEEKS	MODULE & THEME	FIELD OUTCOME
13–14	ChatGPT Voice 2.0 Voice Systems	Prepare, practice, follow up, and coach with a live spoken operating rhythm.
15–16 A	Advanced B2B Voice Integrations Permissioned Systems	Direct bounded tasks, connected context, and approval-ready B2B workflows.
15–16 B	Claude Cowork Advanced Delegation	Turn outcomes into multi-step work, strong deliverables, and responsible review.
17–18	Dreams Cloud Bundle Growth Command Center	Organize leads, follow-up, team coordination, and conversion momentum.
19–20	ChatGPT Work Intelligent Work	Design longer multi-step work with project context, review, and usable outputs.
21	Gemini Notebook Knowledge Systems	Turn trusted source material into cited learning, briefing, and decision support.
22–23	Grok Bot Market Intelligence	Use current signals and agent patterns with a disciplined human approval edge.
24	AI Operator Graduation Capstone	Demonstrate the operating system, share the win, and earn the certificate.

THREE STAGES

The learning system expands in waves.

You do not need every tool at once. You need a disciplined path that gives each new capability a real job and a visible measure of progress.

13–16

Voice → Delegation

Use natural direction, bounded tools, and strong approval edges.

17–20

Command Center → Work

Build the B2B operating rhythm and produce reusable work.

21–24

Knowledge → Graduation

Turn evidence into insight, then demonstrate the full system.

The cohort promise: Every learner leaves with a working personal operating system—not a collection of scattered prompts.

One rhythm. Every module.

The training is designed for 45–60 minute live learning, followed by a short field sprint that converts insight into an operating habit.

01

Orient

Frame the business bottleneck and introduce the week’s operating concept.

02

Watch

See the workflow modeled against a real B2B outcome, with caveats explained.

03

Practice

Run a guided exercise, refine the guardrail, and surface the decision point.

04

Field Test

Complete one real-world action before the next live session.

Use the digital field library: Every section of the agenda site includes an online reader, page controls, and a downloadable color brochure for the corresponding module.

Technology changes. The operating principles do not.

Context before output

Give each tool only the information it needs. State the business objective, audience, boundaries, and definition of a useful result.

Draft before action

Start with research, organization, rehearsal, and review. Expand to external action only where permissions, governance, and accountability are clear.

Source before certainty

When current facts or internal knowledge matter, identify and review the source. Ask tools to flag uncertainty and separate evidence from recommendation.

Human judgment at the edge

Every consequential action should have a visible decision owner. You are not outsourcing responsibility; you are accelerating the work that informs it.

Build it. Use it. Share it.

The fastest way to turn training into advantage is to give each week a working place in the field. Small wins stack into an operating system.

FIELD SPRINT 01 Run one Voice 2.0 pre-call brief.	FIELD SPRINT 02 Map one permissioned integration.	FIELD SPRINT 03 Delegate one Cowork task with review.	FIELD SPRINT 04 Build your Dreams Cloud workflow.	FIELD SPRINT 05 Create one ChatGPT Work deliverable.	FIELD SPRINT 06 Build a source-grounded notebook.	FIELD SPRINT 07 Run a current-signal Grok analysis.
The first workflow I will make real Name the bottleneck, not just the tool.				The proof I will bring to graduation Capture the result, decision, and lesson the system made possible.		

Use the agenda as a field tool.

Feature availability, plan access, workspace settings, connected tools, permissions, and product behavior can change. Confirm the current product experience and your organization's standards before deploying a consequential workflow.
