

COHORT 2 · PRACTICAL AI LEADERSHIP

ChatGPT Voice 2.0

Stop typing. Start directing.

A two-week operating system for turning natural conversation into sharper preparation, faster follow-up, and better field leadership.

WEEK 13

Master the shift, learn the Voice Formula, and build confidence steering a live conversation.

WEEK 14

Apply six field-ready voice plays that turn client conversations into momentum.

THE PROMISE

Less keyboard friction. More thinking, coaching, preparing, and moving the work that matters.

Voice is not dictation. It is direction.

Use this workbook to make Voice a leadership advantage—not a novelty. The goal is to say what you mean, shape the work as it happens, and keep your judgment in the loop.

INSIDE THIS ISSUE

01	The shift: ask & wait → talk & steer	03
02	The practical Voice ladder	04
03	The Four-Part Voice Formula	05
04	Week 13 live-session run of show	06
05	Start in ten minutes	07
06	Week 14: Six Voice Moves	08–09
07	The Chief-of-Staff cadence	10
08	Compass Docs, safety & challenge	11–13
09	Field worksheet & sources	14–15

14

“The best interface is the one that lets your ideas stay in motion.”

YOUR TWO-WEEK SPRINT

01

How to use this book

Read the teaching pages once. Then say every blue prompt out loud in a real Voice conversation. Do not hunt for the “perfect prompt.” Start with a real outcome, interrupt when necessary, and review the result before it moves outside your control.

Important: Feature availability varies by plan, workspace, region, app version, and permissions. Treat this book as a field workflow, not a guarantee that every feature is enabled on every account. [1]

From “ask and wait” to “talk and steer.”

A natural Voice conversation lets you clarify the destination while the work is in motion. You can interrupt, add a constraint, change direction, or ask for the next useful question. [1][2]

OLD WORKFLOW

**Stop. Type. Wait.
Re-explain. Repeat.**

VOICE WORKFLOW

**Talk. Steer.
Delegate. Follow through.**

Say the outcome in plain language. Intervene midstream. Let the conversation keep its context while you improve the work.

The real game changer

The burden shifts from “format the perfect prompt” to “say what you mean, then steer.” Your voice becomes the shortest path between an idea and an actionable draft.

Prepare

Turn scattered notes into a concise pre-call brief, questions, and likely risks.

Practice

Role-play difficult conversations one question at a time, then coach the response.

Move

Debrief while the meeting is fresh and turn memory into a clear next step.

Five levels—from conversation to coordinated work.

Most producers will create immediate value at Levels 1–3. Levels 4–5 depend on the desktop experience, supported tools, permissions, workspace controls, and platform rollout. [1][4][5]

Think ladder, not magic trick

Do not wait for an advanced feature to become useful. Your earliest wins come from speaking outcomes, maintaining continuity, and creating better drafts with less friction.

Use precise language

“Remote” means access to supported desktop task conversations through a paired mobile experience; it does **not** promise general phone-to-computer control. Screen context and agentic tools may be unavailable or restricted. [4][5]

The Four-Part Voice Formula

Say these four ingredients naturally, then interrupt and adjust.
Clear outcomes beat polished wording.

01 CONTEXT

"I just finished a first call with a 70-person firm..."

02 OUTCOME

"Create a concise follow-up that earns a second meeting..."

03 GUARDRAIL

"Use only what I said. Flag anything uncertain..."

04 NEXT STEP

"Then ask me for the two details you still need."

Steering phrase to memorize

"Pause. Make that shorter, use my tone, flag what you are assuming, and ask me one question before you continue."

Conversation, not performance

You can ask Live to wait while you think out loud, but pauses, background noise, and overlapping speech can still trigger a response. State your intention early and work in a quiet setting when possible. [1]

FIELD DRILL — say this out loud: "I need to prepare for a meeting with a business owner. First, ask me five focused questions about the account. When I answer, build a 90-second brief, three discovery questions, and one risk to watch. Separate facts from assumptions."

Run the live demo. Do the work on screen.

The confidence-building moment is not the first answer. It is the first time a learner redirects a long answer and sees the work improve in real time.

MINUTES	FACILITATOR MOVE	LEARNER OUTCOME
0–7	Celebrate the systems they built through Weeks 1–12. Explain that the interface is changing—not the need for judgment.	Learners connect Voice to existing workflows rather than treating it as a separate tool.
7–15	Contrast the old keyboard loop with a fluid Voice conversation. Model an interruption: “Make that tighter and ask me one question.”	They understand that steering is the unlock.
15–28	Build a pre-call brief from one real account. Use Context, Outcome, Guardrail, and Next Step aloud.	They hear a practical B2B application, not a generic demo.
28–40	Turn the brief into a discovery rehearsal and then a follow-up draft. Keep the same conversation moving.	They experience continuity across preparation, practice, and follow-through.
40–50	Discuss advanced desktop possibilities with caveats: availability, permissions, connected-tool controls, and review.	They leave excited and realistic about what their account can do. [1][4][5]
50–60	Assign Day 1 of the 7-Day Challenge. Ask every learner to name the one workflow they will voice-enable first.	They leave with an immediate, concrete practice commitment.

Small setup. Immediate leverage.

Start with a safe, obvious win. Add deeper permissions only when a real workflow earns the access.

1 Open the right experience

Open ChatGPT and select Voice. In the desktop app, start a new Voice chat before sending a message if you want the live desktop Voice experience; an ordinary chat started in another mode uses dictation. [5]

2 Check availability

Review your plan, workspace settings, app version, region, and permissions. Voice options and advanced desktop capabilities do not appear identically for every user. [1]

3 Practice steering

Give Voice one useful task. Interrupt it. Request a shorter version. Change the audience. Ask it to surface assumptions. You are learning a new operating reflex.

4 Delegate a real outcome

Use a pre-call brief, a call debrief, or a coaching outline. Review everything before it becomes client-facing or moves outside the workspace.

5 Consider screen context carefully

On macOS, screen context can capture the image and accessible text of the frontmost window when enabled. Do not show a window containing information you would not share. [5]

6 Build a personal cadence

Pick one short morning, between-call, and end-of-day conversation. Repetition—not feature hunting—turns Voice into an operating advantage.

YOUR FIRST TEN-MINUTE WIN: “Help me decide the one action that would create the most movement in my pipeline today. Ask me questions first. Then give me the action, why it matters, and a 15-minute plan to complete it.”

Six Voice Moves that compound.

You do not need to code. You need a clear outcome, relevant context, strong judgment, and the willingness to say the next move out loud.

01 · Walk in prepared

Pre-Call Intelligence

Turn what you already know into a concise point of view before the conversation begins.

"Review what I have on this account. Give me a 90-second pre-call brief, three smart discovery questions, and one risk I should not overlook. Separate facts from assumptions."

02 · Rehearse the room

Discovery Practice

Use a skeptical buyer to find weak language before you say it in the real meeting.

"Act like a skeptical CFO. Ask one hard question at a time. After each answer, coach me on clarity, credibility, and the next question to ask."

03 · Follow up while fresh

Meeting → Momentum

Turn spoken memory into a clear, reviewable record while the details still have energy.

"I'm going to debrief a call out loud. When I finish, draft a concise follow-up with decisions, open questions, owners, and one clear next step. Do not invent details."

04 · Build the loop

Trust → Introduction

Translate client value into referral moments that feel natural instead of transactional.

"Based on this client outcome, suggest three natural referral moments. Draft a warm, low-pressure referral ask and a forwardable note they can send in under 30 seconds."

Two more moves. One stronger team.

The best Voice workflows do not merely create output. They create focused action, better practice, and reusable leadership moments.

05 · COACH THE NEXT MOVE

Pipeline Focus

Move from activity to traction. Use Voice to inspect what changed, surface the real blocker, and choose the one practical next action.

“Help me inspect today’s pipeline. For each active opportunity, ask what changed, flag the real blocker, and recommend one practical next action. Prioritize movement over busywork.”

06 · MULTIPLY YOUR BEST

Team Enablement

Convert a field lesson into a repeatable coaching experience, without waiting for a full production cycle.

“Turn this voice note into a 10-minute sales huddle: one lesson, one example, three coaching questions, and a two-person practice drill. Keep it simple and field-ready.”

One standard for every Voice Move

Draft fast. Verify before use. Voice may accelerate the first pass; it does not replace your fact-checking, compliance review, client sensitivity, or professional judgment. [1][3]

A Chief-of-Staff cadence for the field.

Three short conversations. No new dashboard to worship.
Voice becomes most valuable when it helps you prepare,
recover momentum, and close the day cleanly.

08:00

MORNING KICKOFF

Choose the one action that matters.

Ask for a short status recap and the next action with the greatest leverage—before the inbox starts choosing your day.

“What do you know about today? What is the one action that will create the most movement? Help me block the first 30 minutes.”

BETWEEN

STREAM OF CONSCIOUSNESS

Turn memory into momentum.

Brain-dump while mobile. Speak the idea, debrief, or half-formed plan. Convert it into a follow-up, preparation, or a clean list of questions.

“Wait until I say I’m done. Then organize this into decisions, uncertainties, and the next three actions.”

16:30

END-OF-DAY DEBRIEF

Tomorrow begins before today ends.

Ask what moved, what stalled, and what can be prepared now so tomorrow begins with a clear advantage.

“Review today with me. What moved, what stalled, and what should be ready by 8:00 tomorrow?”

Keep the cadence short

Do not turn Voice into another meeting. A useful conversation ends with a decision, a draft, or a focused next action.

Use the transcript as a review trail

Voice responses appear in the chat and a transcript is added afterward. Treat the written record as your review surface, not as a word-for-word legal record. [1]

Two habits that change everything.

Use Voice to make your work more legible to the system—and to yourself. These habits give context a home and turn uncertainty into better questions.

HABIT 01

The Compass Doc

Maintain one concise project document with the outcome, short-term objectives, key constraints, and what “done” looks like. The purpose is not to create more documentation; it is to reduce guessing.

In a supported desktop Work or Codex setting, local files and project context can be used only with your permission and within the controls of that experience. [4]

SAY: “Create a Compass Doc for this project: the objective, the long-term goal, the constraints, what success looks like, and the first three milestones. Ask me what is missing.”

HABIT 02

Reverse Prompting

Ask more questions than you give commands. This makes room for blind spots, counterarguments, and the unknown unknowns that a checklist misses.

Use it before a consequential decision, client communication, recruiting move, or training rollout. You are not outsourcing judgment; you are improving the quality of the questions.

SAY: “What am I missing? What would a skeptical decision-maker challenge? Ask me the questions that would materially improve this plan.”

Speed deserves a safety system.

Voice can remove friction. That means an error can travel farther, faster. Build a pause for truth, permission, and professional judgment before anything consequential moves.

Never speak sensitive client data into an AI tool.

Do not provide Social Security numbers, account numbers, health information, policy numbers, passwords, or other information that your organization prohibits or that could expose a client.

Separate facts from assumptions.

Ask Voice to flag uncertainty. Verify current rates, regulations, carrier or product details, dates, and client-facing claims before you use them. ChatGPT can make mistakes. [1]

Inspect the screen before enabling context.

On macOS, an appshot may include accessible text outside the visible scroll area. Close sensitive material first and grant only the permissions the task actually requires. [5]

Review before any external action.

When connected tools are in play, permissions and approval settings determine what may happen. Choose restrictive settings appropriate for your risk tolerance and read approval cards carefully. [3]

The “before it leaves” checklist

Before a draft becomes an email, meeting note, recommendation, file change, or client communication, stop and review.

- ✓ Is every factual claim current and supportable?
- ✓ Did the draft invent or imply details?
- ✓ Does it match the client, brand, and compliance standard?
- ✓ Have I removed sensitive information?
- ✓ Am I personally comfortable approving the next action?

Principle: Voice can prepare the work. You remain responsible for the decision.

The 7-Day Voice Challenge

One move a day. By the end of the week, Voice is not an experiment—it is a stronger default.

DAY 1

01

Run one pre-call brief out loud. Separate facts from assumptions.

DAY 2

02

Role-play a skeptical CFO for ten minutes. Ask for coaching after each answer.

DAY 3

03

Debrief one real call by voice, then review a follow-up draft.

DAY 4

04

Find three referral moments and create a warm, low-pressure ask.

DAY 5

05

Voice-inspect your pipeline. Take the one action with the most movement.

DAY 6

06

Build a Compass Doc for the project that matters most this quarter.

DAY 7

07

Run the full cadence: kickoff, between-call reset, and end-of-day debrief.

Track the shift, not the novelty.

At the end of each day, circle your rating. Bring the one task that became dramatically faster—and the one task that still needs a better system.

Daily reflection	1	2	3	4	5
I knew the outcome I wanted.	☐	☐	☐	☐	☐
I steered the conversation instead of accepting the first answer.	☐	☐	☐	☐	☐
I reviewed the result before using it.	☐	☐	☐	☐	☐

My Voice 2.0 field plan

Complete this page before the next training. One clear use case is worth more than ten saved prompts.

1. The workflow I will voice-enable first

Choose a real preparation, practice, follow-up, pipeline, or team-enablement moment.

2. The outcome I want

Make it observable. What would a strong result allow you to do next?

3. My guardrail

What must remain true? Examples: do not invent details; use my tone; flag uncertainty; do not include sensitive data.

4. My next conversation begins with...

Write the first sentence. Then say it out loud before you revise it on paper.

Commitment

"Before the next session, I will use Voice for _____ on _____ . I will measure whether it helped me prepare, move, or coach more effectively."

FIELD-READY

Use the right feature for the job.

This workbook uses “Voice 2.0” as a teaching label, not as a separate official product name. The current ChatGPT experience differs by plan, platform, workspace controls, rollout, and permissions.

What this workbook means by Voice

Use ChatGPT Voice when a live, spoken conversation helps you think, prepare, role-play, or shape a draft. Live supports natural turn-taking, follow-up, and interruption. [1][2]

What “advanced” means here

Desktop Voice in Work and Codex can coordinate tasks using the tools and permissions in the selected experience. It is distinct from ordinary Chat Voice and from mobile Advanced Voice. [1][4][5]

Sources reviewed August 21, 2026. Product availability and feature behavior can change. Confirm the current in-product settings and official documentation before teaching or deploying an advanced workflow.

Speak the outcome. Steer the work. Keep the judgment.

Bring the task that got dramatically faster to the next session.
The future is not typing less. It is leading the work with more
clarity, context, and follow-through.

Next up: Weeks 15–16 — Claude Cowork: Advanced Delegation.
