

WEEKS 19-20 · INTELLIGENT WORK

ChatGPT Work

Turn direction into durable output.

A field guide for building longer multi-step work with project context, review points, and meaningful deliverables.

**DEFINE**

Describe the outcome, audience, sources, limits, and review standard.

DELEGATE

Create an accountable work thread that can organize, analyze, and draft.

DECIDE

Use the completed work to improve a real B2B decision, not to create more content.

Create a work system, not just a response.

ChatGPT Work is for tasks that need more context, more steps, and a practical deliverable. The leadership skill is knowing what to hand off, what sources are relevant, and what must be reviewed before it becomes action. [1]

“Useful work has a destination. Exceptional work returns with the choices made visible.”

THE OPERATING SHIFT

OUTCOME

Work brief

Turn a vague goal into a clear deliverable, audience, constraints, and acceptance criteria.

CONTEXT

Project discipline

Keep the files, notes, instructions, and decisions that belong together in one deliberate work context.

REVIEW

Decision quality

Ask for evidence, options, uncertainty, and a recommendation—not just an answer.

From request to review-ready deliverable.

Learners should leave knowing when an objective belongs in a task environment rather than a quick conversation.

MINUTES	FACILITATOR MOVE	LEARNER RESULT
0–8	Compare a quick answer with a multi-step work deliverable.	A clear reason to use a work thread.
8–18	Build a Work Brief around a live B2B initiative.	A target deliverable with criteria and guardrails.
18–32	Model research, organization, drafting, and review within a single project context.	A visible sequence instead of a generic prompt.
32–45	Ask the work to surface uncertainty, decision options, and a recommended path.	Better leadership information, not more output.
45–60	Assign a single real Work task and a review appointment.	A field test tied to an actual business decision.

Teaching principle: If the work will inform a decision, make the sources, assumptions, and recommendation visible in the deliverable.

Four work patterns that scale leadership.

Use the pattern that turns your current bottleneck into an evidence-aware, review-ready outcome.

01 · STRATEGY

Decision memo

Turn scattered information into a concise memo that clarifies options and tradeoffs.

"Create a decision memo from the approved project context. Separate facts, assumptions, options, risks, and your recommendation."

02 · MEETINGS

Executive recap

Convert long notes into an outcome, ownership, and next-step tool.

"Turn these meeting notes into an executive recap with decisions, owners, open questions, deadlines, and a draft communication for review."

03 · ENABLEMENT

Field resource

Build a reusable resource that helps the team apply a concept, not just read about it.

"Create a field-ready training resource with one core lesson, an example, three coaching questions, and a practice drill."

04 · ANALYSIS

Signal report

Turn raw activity, pipeline, or feedback into a leader's point of view.

"Analyze this material for patterns, risk, leverage points, and the next decision. Show the evidence behind each conclusion."

The Work Brief

Before you start the task, make four inputs explicit so the result does not drift.

01

Deliverable

What finished artifact will make the work useful?

02

Audience

Who will use it, decide from it, or receive it?

03

Sources

Which approved facts, files, notes, and instructions may shape the work?

04

Review

What must be checked before the output becomes a decision or external action?

Control point: Use Work for substantive, multi-step tasks. For a simple question, use a faster conversational mode; reserve deeper work for a meaningful outcome. [1]

The 7-Day Intelligent Work Challenge

Build one durable work pattern that improves a real leadership decision.

DAY 1 01 Write one Work Brief.	DAY 2 02 Create an internal decision memo.	DAY 3 03 Turn notes into an executive recap.	DAY 4 04 Build a field enablement tool.	DAY 5 05 Request an evidence-backed signal report.	DAY 6 06 Refine a deliverable with feedback.	DAY 7 07 Use the work in a real decision.
---	---	---	--	---	---	--

The work deliverable I need most Name the artifact that would remove a current bottleneck.	The review standard I will apply Define the evidence, accuracy, tone, and decision checks.
