

WEEKS 15-16 · PART B · ADVANCED DELEGATION

Claude Cowork

Hand off the work. Keep the judgment.

A field guide for turning complex B2B outcomes into responsible multi-step delegation.

OUTCOME FIRST

Describe the business result, constraints, sources, and review criteria.

TASKS IN MOTION

Use projects and multi-step work for tasks worth more than a chat reply.

HUMAN AT THE EDGE

Stay close when access, messages, money, external systems, or sensitive information matter.

From scattered work to responsible delegation.

Cowork turns a defined outcome into persistent multi-step work. The practical skill is not “asking more.” It is scoping the task, choosing the permissions, and reviewing the result before it affects the real world. [1][2]

15

“A good delegation brief gives the task a destination, a boundary, and a reason to return for judgment.”

THE OPERATING SHIFT

OUTCOME

Outcome brief

State what done looks like, why it matters, and how the result will be judged.

SCOPE

Trusted context

Connect only the specific files, tools, and sources that the task truly requires.

OVERSIGHT

Review edge

Use the right approval mode and keep high-stakes decisions visibly owned by a person.

Teach the task loop, then stress-test the boundary.

The learner should leave able to write a delegation brief that is clear enough to run and constrained enough to trust.

MINUTES	FACILITATOR MOVE	LEARNER RESULT
0–8	Contrast chat with multi-step task work. Identify one B2B bottleneck that is worth a persistent task.	A real use case with a measurable business outcome.
8–18	Model the Outcome Brief: result, context, constraints, review criteria, and stop condition.	A reusable pattern for high-quality delegation.
18–32	Demo a low-risk research-to-draft task using a dedicated working folder or project.	They see work continue while the leader retains direction.
32–45	Teach Manual, Auto, and Skip approval concepts; discuss where oversight rises with risk.	A language for matching review to stakes. [1][2]
45–60	Paired practice: one writes a brief, one acts as risk officer, then swap.	A tightened brief with visible action and data boundaries.

Teaching principle: A task that cannot name its output, source boundary, approval point, and stop condition is not ready to delegate.

Four delegation moves that protect momentum.

Start with the workflow where the task can create a strong internal deliverable before it creates an external consequence.

01 · RESEARCH

Decision dossier

Collect approved material, organize evidence, and return a decision-ready brief.

"Using only this project's approved context, prepare a decision dossier with evidence, open questions, and options. Do not contact anyone or change any external system."

02 · DOCUMENTS

Field-ready deliverable

Turn messy notes into a polished internal resource, report, or presentation draft.

"Create a field-ready draft from these materials. Keep source references visible, flag assumptions, and wait for my review before publishing or sharing."

03 · PROJECTS

Operating workspace

Keep related tasks, files, instructions, and outcomes inside a deliberate project context.

"Set up the project with the objective, required deliverables, source rules, recurring check-in questions, and a summary of what requires my approval."

04 · FOLLOW-THROUGH

Approval brief

Make the decision edge visible before a task sends, edits, deletes, or commits.

"Prepare the approval brief: exact proposed action, destination, evidence, risk, and the choice you need from me. Do not proceed."

The 4-part Outcome Brief

Use this structure whenever the task is meaningful enough to continue after the initial conversation.

01

Destination

Name the deliverable and the business decision it should improve.

02

Context

Identify the exact project, file set, or trusted information the task may use.

03

Boundary

State what it must not do: send, publish, delete, purchase, share, or access beyond scope.

04

Review

Define how it should report progress and the condition that requires an explicit approval.

Control point: For sensitive files, new tools, browser use, messages, purchases, or irreversible changes, use a strict approval mode and stay close to the task. [2]

The 7-Day Delegation Challenge

Build trust through small, visible, repeatable wins—never by starting with your most consequential workflow.

DAY 1

01

Write one Outcome Brief.

DAY 2

02

Create a dedicated working folder.

DAY 3

03

Delegate a research-to-draft task.

DAY 4

04

Add a clear stop condition.

DAY 5

05

Review an output for assumptions.

DAY 6

06

Refine the brief from what you learned.

DAY 7

07

Share your best delegation pattern.

The outcome I will delegate first

Make the result observable and valuable.

The review edge I will protect

State what must wait for human approval.
