

WEEKS 21 • KNOWLEDGE SYSTEMS

Gemini Notebook

Trust the source. Strengthen the decision.

A source-grounded research field guide for turning approved knowledge into clearer learning, briefings, and business insights.

SOURCE FIRST

Build from trusted PDFs, files, web material, recordings, and project evidence.

CITED INSIGHT

Use clear citation trails to move from answer to evidence.

KNOWLEDGE ASSET

Convert source material into field guides, briefings, study tools, and decision support.

Build a trusted knowledge engine.

Gemini Notebook (formerly NotebookLM) is designed to work from source material you provide or approve, helping you synthesize, cite, and transform knowledge into usable outputs. [1][2] The field skill is source discipline: choose, organize, question, and verify.

21

“The quality of a knowledge system begins with what you are willing to trust.”

THE OPERATING SHIFT

SOURCES

Evidence library

Curate the documents, data, recordings, and web material that deserve to inform the team.

QUESTIONS

Inquiry design

Ask for comparisons, contradictions, decision points, and evidence—not just summaries.

OUTPUTS

Field assets

Transform grounded research into briefings, training resources, charts, or decision-support formats where available.

Build the notebook before you ask the question.

Learners should leave with a small, high-quality source set and a clear research question that matters in the field.

MINUTES	FACILITATOR MOVE	LEARNER RESULT
0–8	Contrast generic AI research with source-grounded inquiry.	A shared language for trust, citation, and verification.
8–20	Create a source set: policies, meeting notes, product materials, industry content, or trusted internal documents.	A focused evidence library.
20–32	Model question patterns: explain, compare, challenge, extract, and advise with citations.	Answers that point back to source material.
32–45	Turn findings into a briefing, teaching outline, or decision asset.	A practical output that uses evidence well.
45–60	Assign the Knowledge Sprint.	One notebook that helps a real business question this week.

Teaching principle: A research tool can accelerate understanding; it does not eliminate the need to judge source quality, relevance, or currency.

Four source-grounded moves.

Build the notebook that gives you the clearest reliable view of the next question your business must answer.

01 · BRIEFING

Evidence brief

Turn several trusted sources into a short decision briefing with citations.

"Using only these sources, create a two-page evidence brief: key facts, disagreements, risks, questions, and citations for each major claim."

02 · ENABLEMENT

Learning guide

Create a training resource that keeps the source evidence visible.

"Turn these source materials into a field learning guide with the core lesson, examples, coaching questions, and exact source references."

03 · COMPARISON

Options matrix

Compare alternatives without losing the differences in evidence.

"Compare the options using only the source set. Build a matrix of strengths, constraints, unanswered questions, and supporting citations."

04 · DUE DILIGENCE

Claim check

Pressure-test a message, assumption, or recommendation against the evidence.

"Review this claim against the approved sources. Mark what is supported, uncertain, contradicted, or missing, and cite the evidence."

The evidence-to-action loop

A good notebook moves through a repeatable chain of trust before it influences a decision.

01

Curate

Select the source material that is relevant, reputable, and appropriate to share.

02

Question

Ask a specific decision-oriented question, not "summarize everything."

03

Cite

Trace major statements back to an exact source and notice what remains uncertain.

04

Apply

Convert evidence into a briefing, practice, decision note, or next action that a person reviews.

Control point: When research affects compliance, money, policy, or a client communication, verify the actual authoritative source—not merely the generated summary.

The 7-Day Knowledge Sprint

Build the smallest trusted notebook that would improve a current B2B decision.

DAY 1 01 Choose one business question.	DAY 2 02 Add three trusted sources.	DAY 3 03 Ask for a cited evidence brief.	DAY 4 04 Identify a contradiction.	DAY 5 05 Create a learning guide.	DAY 6 06 Build an options matrix.	DAY 7 07 Share a sourced insight with your team.
---	--	---	---	--	--	---

The question my notebook must answer

Tie it to a decision, opportunity, or recurring coaching need.

The sources I will trust

List the approved source categories and what must stay out.

FIELD-READY
